ImWeb — observation sheet

For the person running a workshop, or a student helping them. The aim is to find out **where people get stuck**, not to test the students. If someone is stuck, that is a fault in ImWeb, and it is exactly what this sheet is for.

How to use it: watch two or three students closely rather than the whole room. Don't help straight away — count to ten first, and note what they try. Then help, and note what fixed it.

Session: _____ Date: _____ Number of students: ____

Five moments to watch

For each one, tick how it went and write what you saw.

#	Moment	Easy	Hesitated	Needed help	What did they try? What fixed it?
1	**The first screen.** Do they choose a way in, and do they understand what it offers?	☐	☐	☐	
2	**Changing a value.** Do they discover dragging sideways on their own?	☐	☐	☐	
3	**Finding a control.** Ask: "make the picture spin" or "add feedback". Do they find it — by browsing, or with ⌘K?	☐	☐	☐	
4	**A tutorial.** Does *Load starting point* work for them, and can they follow the five moves? Which step loses them?	☐	☐	☐	
5	**Saving and recalling.** Can they save a Look (Shift+S) and bring it back with a number key?	☐	☐	☐	

Moments of confusion

Write down anything a student says out loud when confused ("where is…", "why did it…", "what does … mean"). Their exact words are the most useful thing on this sheet.

Time	What they were trying to do	What they said or did

Words they didn't understand

Labels, menu names or messages that meant nothing to them:

Five questions at the end

Ask the room, or a few students one at a time. Short answers are fine.

1. What did you make that you liked?
2. What was the most confusing moment?
3. What did you want to do but couldn’t find?
4. Would you use it again on your own? For what?
5. If you could change one thing about it, what would it be?

Notes:

Please send this sheet (a photo is fine) or a few sentences to Haraldur Karlsson, or post at https://github.com/imweb-project/ImWeb/discussions. Thank you.
